CF CHILLER FRIGORIFERI srl is a TEAM of people who work professionally together with the aim of offering customers not only a product but also a human relationship. The company is able to offer a wide range of products, water chillers and heat pump, wide range of cooling or heating capacities in different technical solution. We can moreover offer some solutions called 'CF-SKID' in order to connect the water chiller or heat pump to some critical plant (for instance aggressive water, high delta temperatura, food clean water etc.) 'CF Chiller Frigorifer' represents the right instrument for choosing the need the heat coming from your system using cool water. [2015 Mercury Mariner Service Manual](#). Our target is to offer the best product in terms of quality/price, to give high quality and reliable products during the time.

Again we want to offer the best technical solution and/or services thanks to our wide range of products in sales, in rental or thanks to our qualified service team. We are a manufacturing company of water chiller and heat pump for sale, but we offer in Italy the possibility to rent our products. Outside of Italy we can supply our rental fleet to specialized company our thanks to our distributors partners. In Italy sometime to rent a chiller is the best choice than to buy, we want to do the same also outside of Italy but through specialized rental company or through our distributors. [Scenic Workshop Manual](#). CF CHILLER FRIGORIFERI is a mark of high quality, the products indeed come out from very expert people, workers are in very close contact with engineering people in a friendly and professional team. You are always welcome to plan a visit in our company for have a look to our production, products, testing chambers.

The experience in the correct sizing of refrigeration machines has been the result of over 15 years of professionalism in the various applications where cold water is required for the air conditioning or comfort as for industrial, process cooling applications. We are able to manufacture chillers able to work 365 day per year, 24 hours per day, so our products are installed for cooling important sectors as: plastic, hydraulics, welding, galvanizing, paper mill, ceramics and food etc. We can also manufacture oil cooling unit.

You can see some of our installation on the reference page, many of them are made outside of Italy. WE ARE LOOKING FOR NEW DISTRIBUTOR PARTNERS CF CHILLER FRIGORIFERI is looking to find some company who wants to sell our products in their nation. We are researching serious new distributor partner who want to collaborate in friendly, professional and long term relation. [2018k Hemodialysis Paediatric Service Manual](#). CF CHILLER FRIGORIFERI is working already in some nation with a single distributor partner, each of them can easily speak with you showing our style of collaboration.

On the same time, we look for company totally motivated in reaching the target, serious in working with CF as CF will work with you. If you are interest, please call our commercial office. RENTAL CHILLER CONFIGURATION CF CHILLER FRIGORIFERI is able to manufacture chiller or heat pump for rental application, to sell these units to specialized rental companies or our distributors partner. water chiller, heat pump, refrigeration, process cooling, air conditioning, compressors, refrigeration, industrial, food system, fan coils, hotels cooling, cooling engineering, cold, ice, water tanks, spare parts, oil cooling, references, industrial application MORE INFORMATION: write to by phone, dial the number + 39 0 by fax, dial number: +39 0 by email, push.

Water Chiller System What is the difference between a water chiller system and a window air conditioner? In a window air conditioner, refrigerant is flowing through the coil that cools the room's air. In a cold water is flowing through the coil that cools the room's air. The air conditioning machine that cools the water is called a chiller, and it will be located in a dedicated machinery area somewhere in the building on the roof, or outside. In the chiller, refrigerant flows through the coil that cools the chilled water. The chilled water is pumped through a piping loop to air handlers in the spaces to be cooled, where it absorbs heat from the air that flows over the air handling coil.
